

In the claims:

Claims 1-8 canceled.

9. (New) A floor covering based on a perforated polyvinyl chloride sheet, comprising: an integrated sheet body prepared by laminating and fusing 2 to 20 perforated high density polyvinyl chloride sheets, each having a plurality of holes; a glass fiber sheet attached to a side of the integrated sheet body selected from the group consisting of an upper side and a lower side; and a wood thin film, having a UV coated layer, attached to an uppermost side of the resulting integrated sheet body.

10. (New) The floor covering according to claim 1, wherein a further glass fiber sheet is attached to the other side of the integrated sheet body to which the first-mentioned glass fiber sheet is not attached.
